

## Gobuster

Gobuster is a tool used to brute-force:

- URIs (directories and files) in web sites.
- DNS subdomains (with wildcard support).
- Virtual Host names on target web servers.

### DIR mode

To find directories and files.

```
gobuster dir -u <url> -w <wordlist_file.txt> -x <file_extensions>
```

### vhost mode

Check if subdomain exists by visiting url and verifying the IP address.

```
gobuster vhost -v -w <wordlist.txt> -u <url> -o <output_file.txt>
```

### DNS mode

To find subdomains in a specific domain.

```
gobuster dns -d <domain> -w <wordlist.txt> -i
```
